

Mongo DB Installation on Windows

-By Aditya Nikam(BE AI &DS)

Step 1:-Click on the below link:-

<https://www.mongodb.com/try/download/community>

Scroll down the page till you see something like below Image

The database is also offered as a fully managed service with MongoDB Atlas. Get access to advanced functionality such as auto-scale, full-text search, and data distribution across regions and clouds. Deploy in minutes on AWS, Google Cloud, and/or Azure, with no downloads necessary.

Or, to install the Community version locally:

Version	8.3.1 (current)	▼
Platform	Windows x64	▼
Package	msi	▼

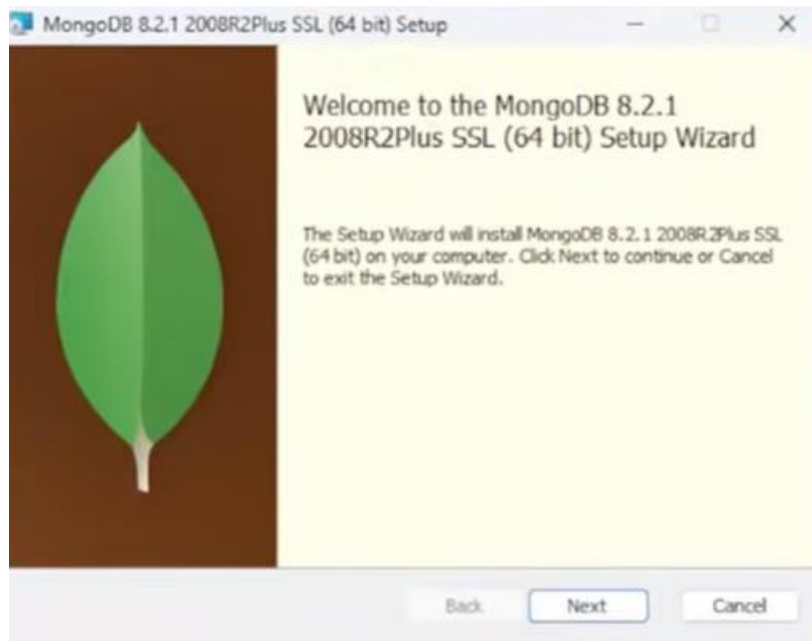

Download ⬇

 Copy link

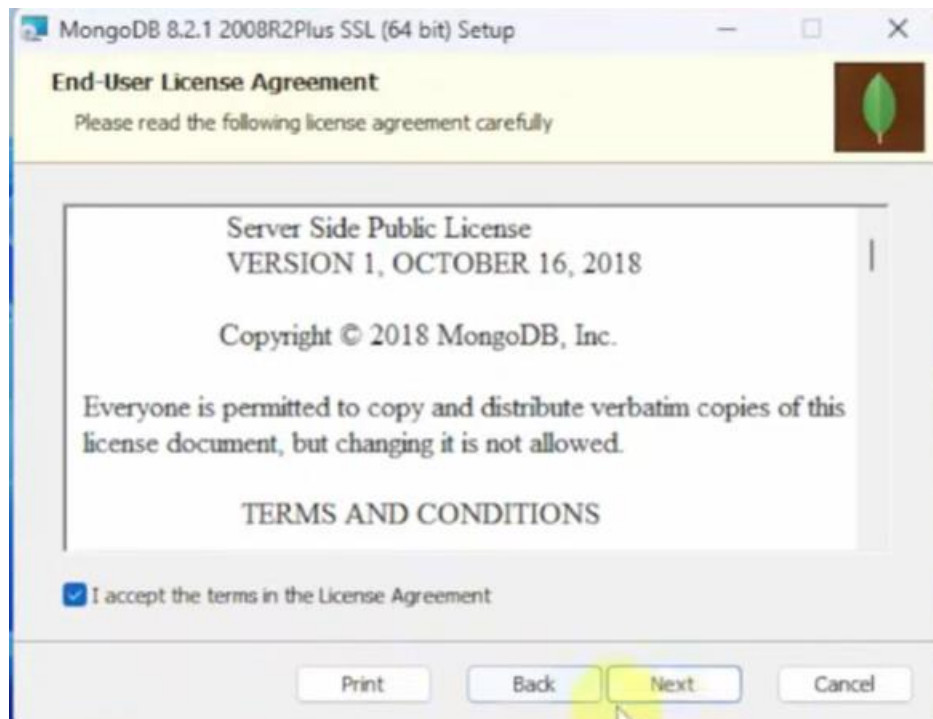

More Options ...

Now Ensure that Platform is “Windows x64” and package as “msi”.The version may differ as of May 2026 version 8.3.1 is the latest.Click on Download and downloading will start.

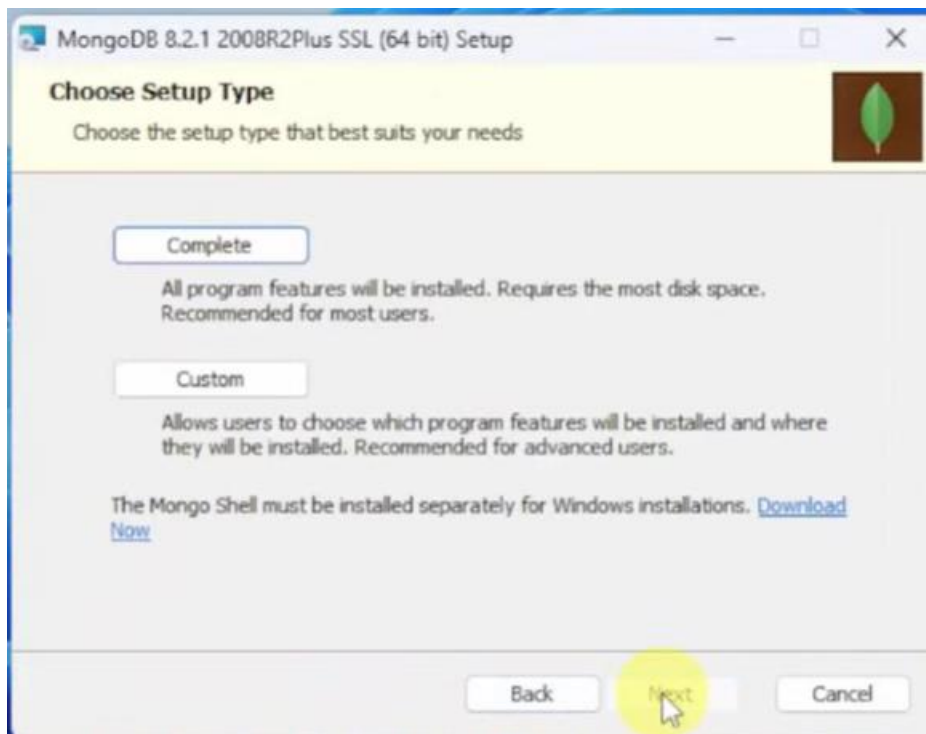

After the downloading is finished.Open the file.You will see something like below on your screen

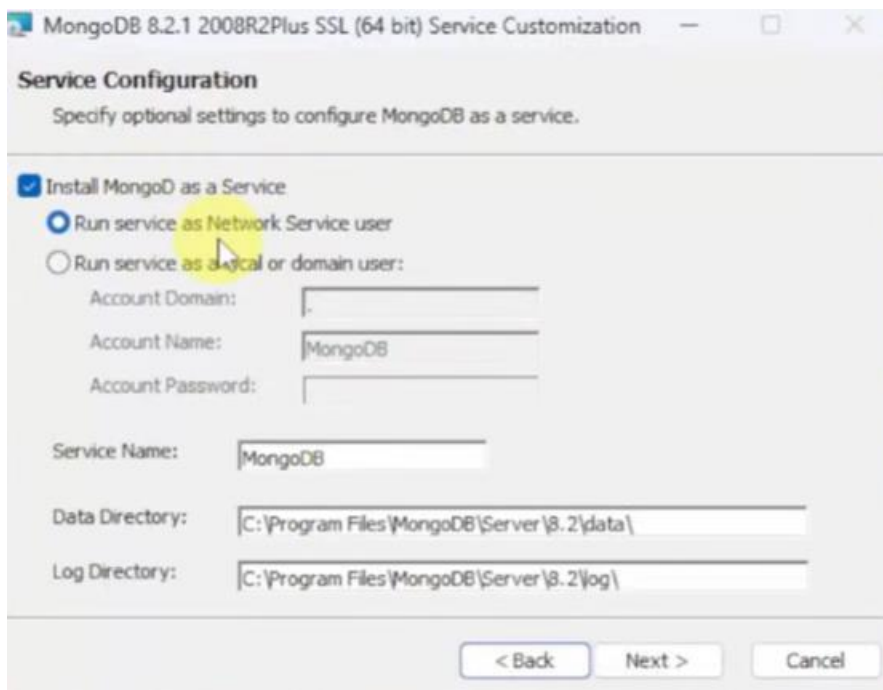

Click Next. Then check the I accept the terms box and click Next.

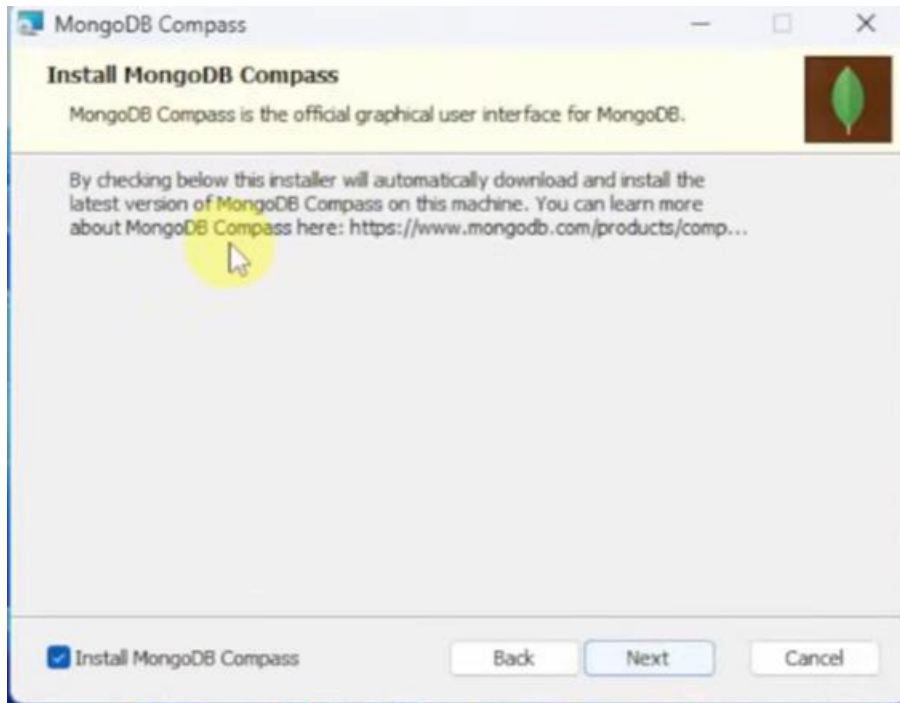

Now click Complete and then click Next

Now Service Configuration page will open keep it as it is and Click Next

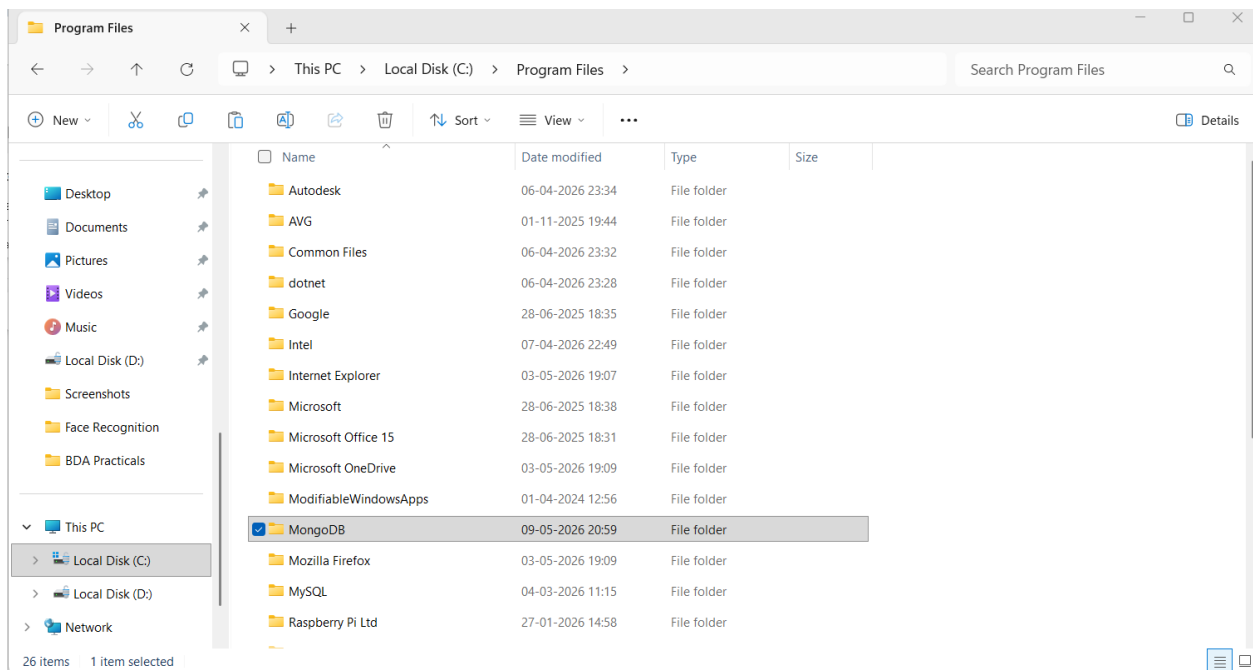

Now keep the Install MongoDB Compass Box as checked click Next

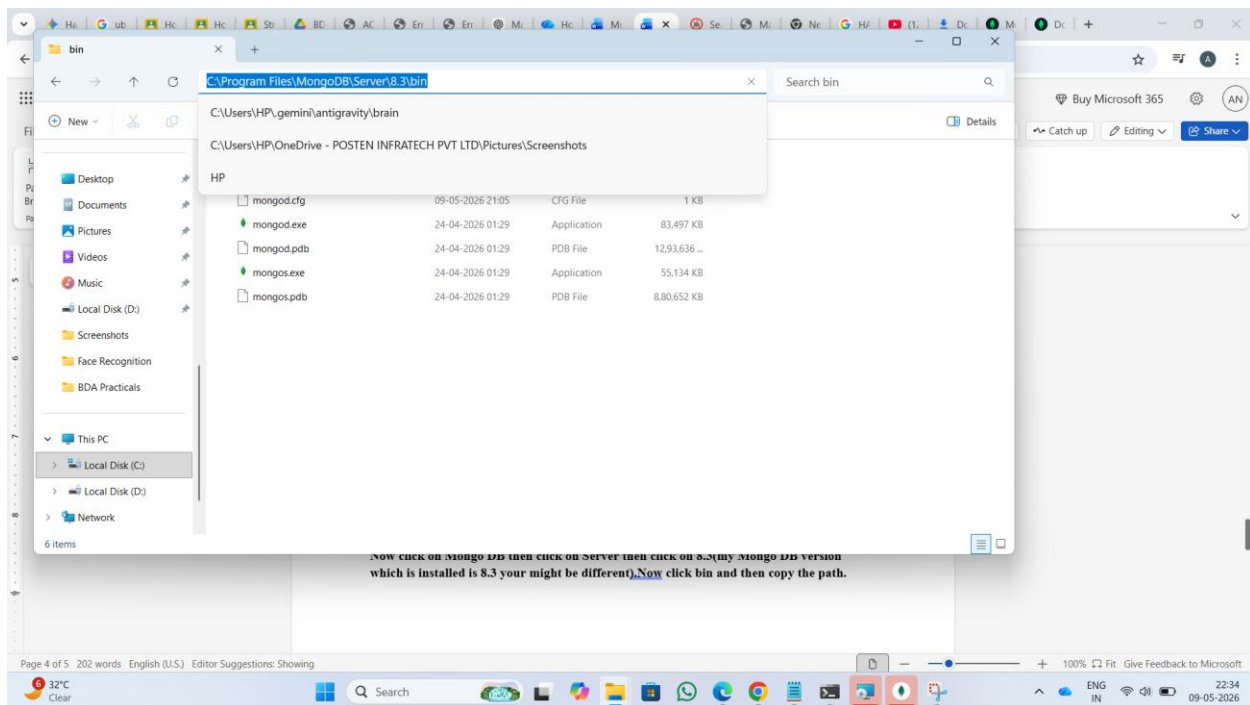

Now one Pop up will come saying that Do you want this app to make changes on your device click on Yes and then Installation will start.

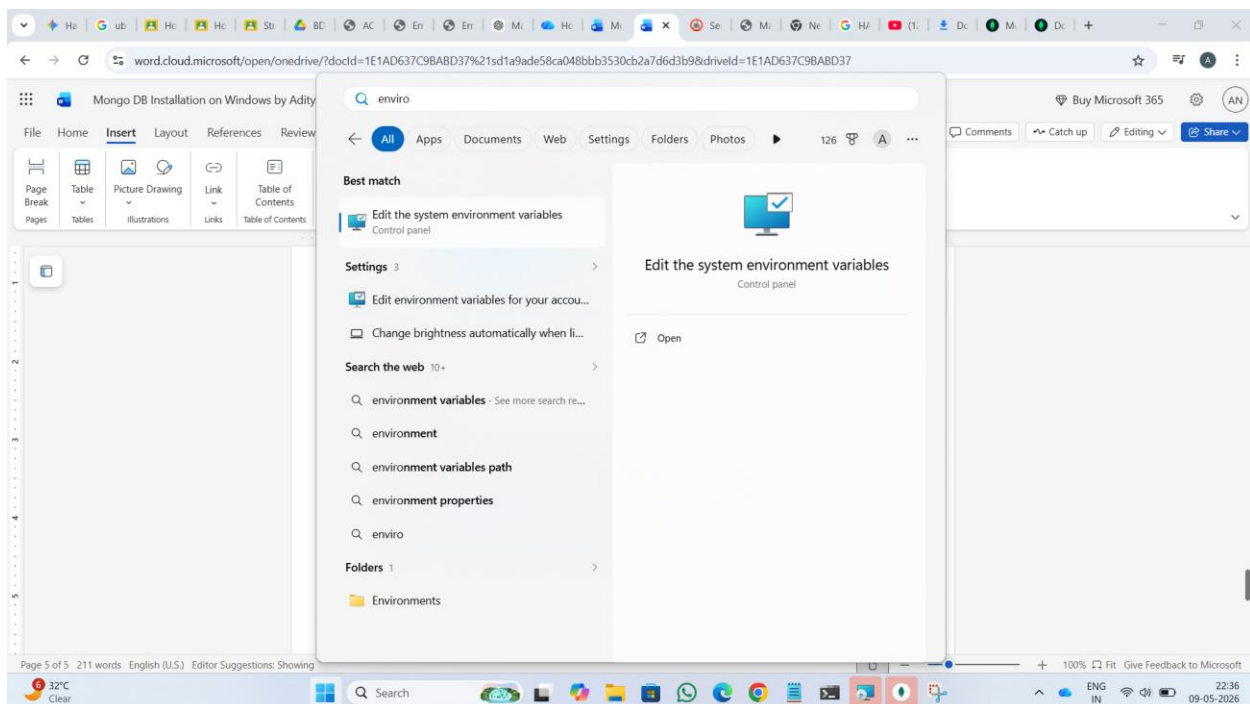

Now open File Folder and Go to the path where we Installed Mongo DB means in C Drive go to Program Files and search for Mongo DB

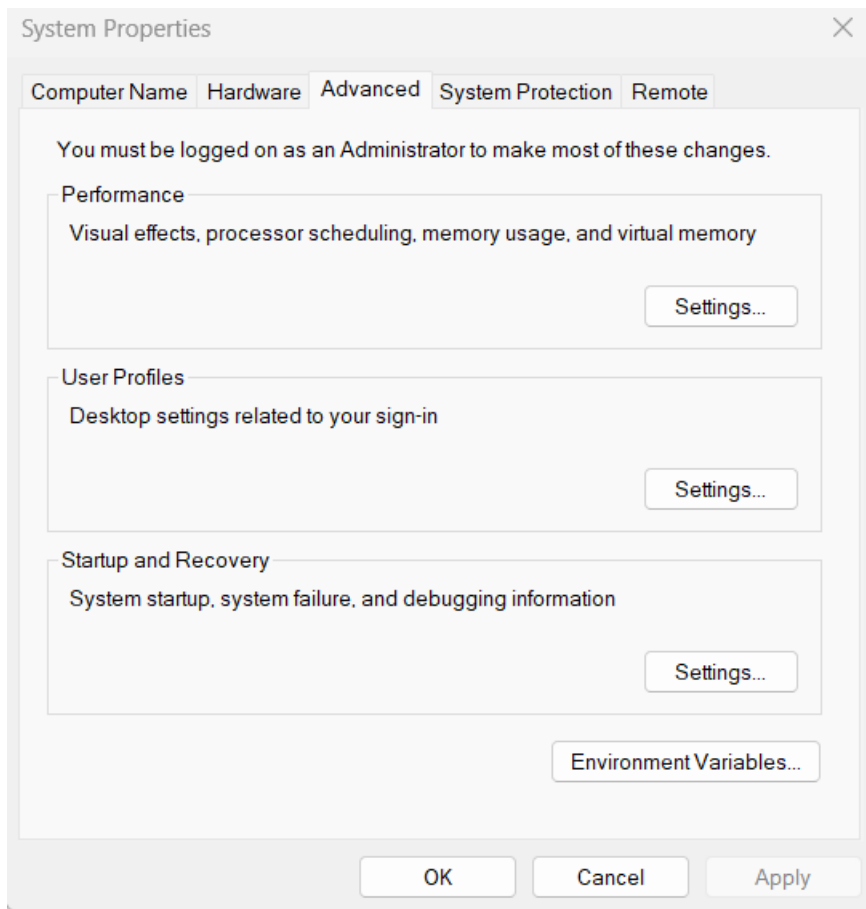

Now click on Mongo DB then click on Server then click on 8.3(my Mongo DB version which is installed is 8.3 your might be different).Now click bin and then copy the path.

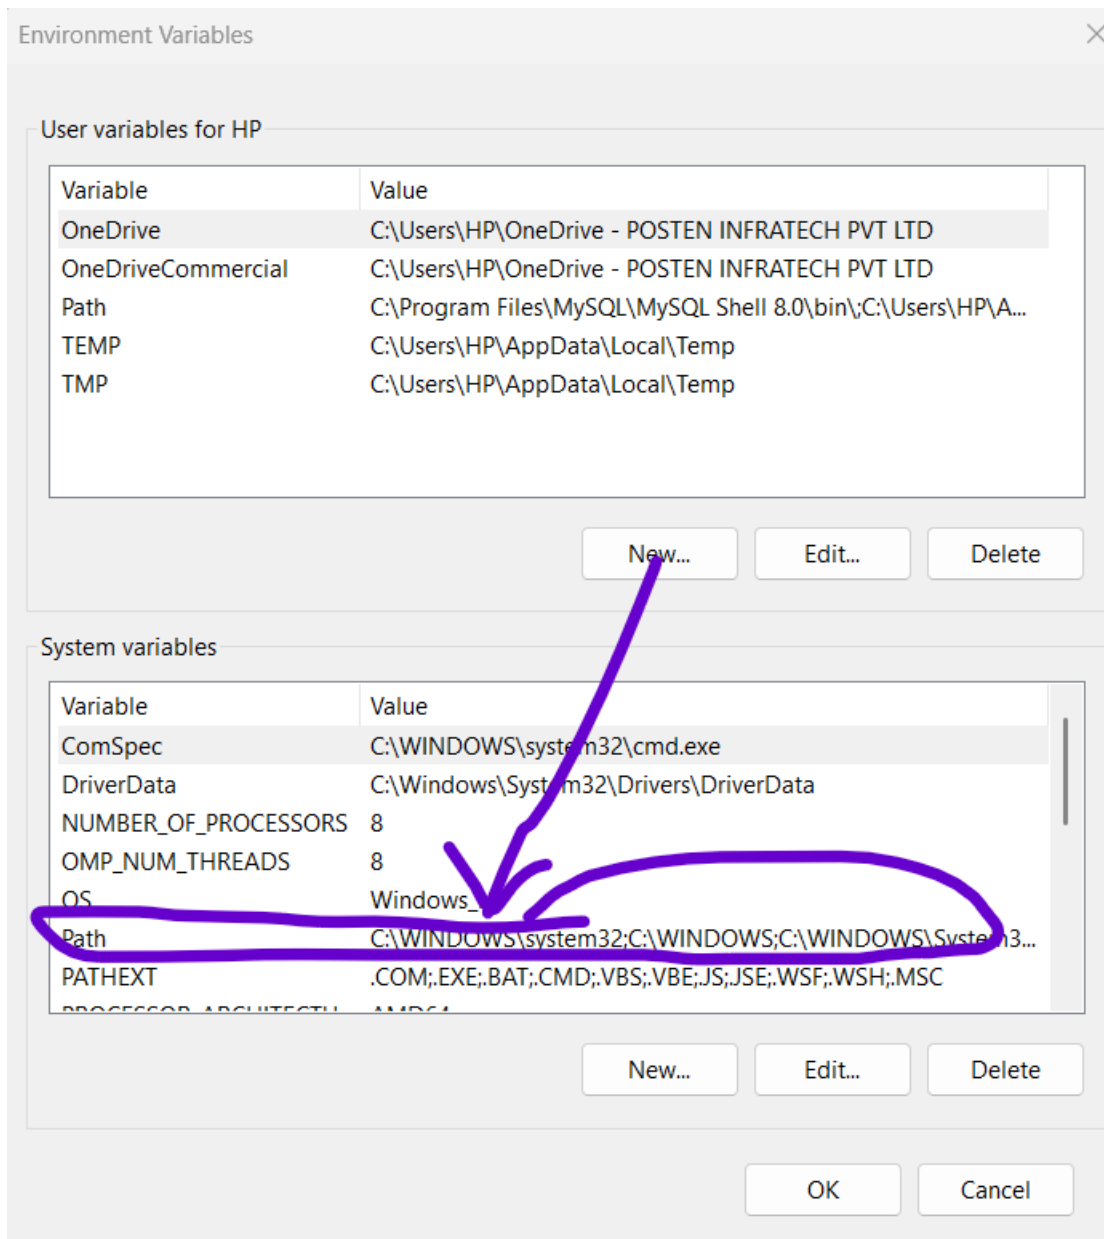

Now go to Start Menu and type “Environment Variables” and then click Edit Environment Variables option

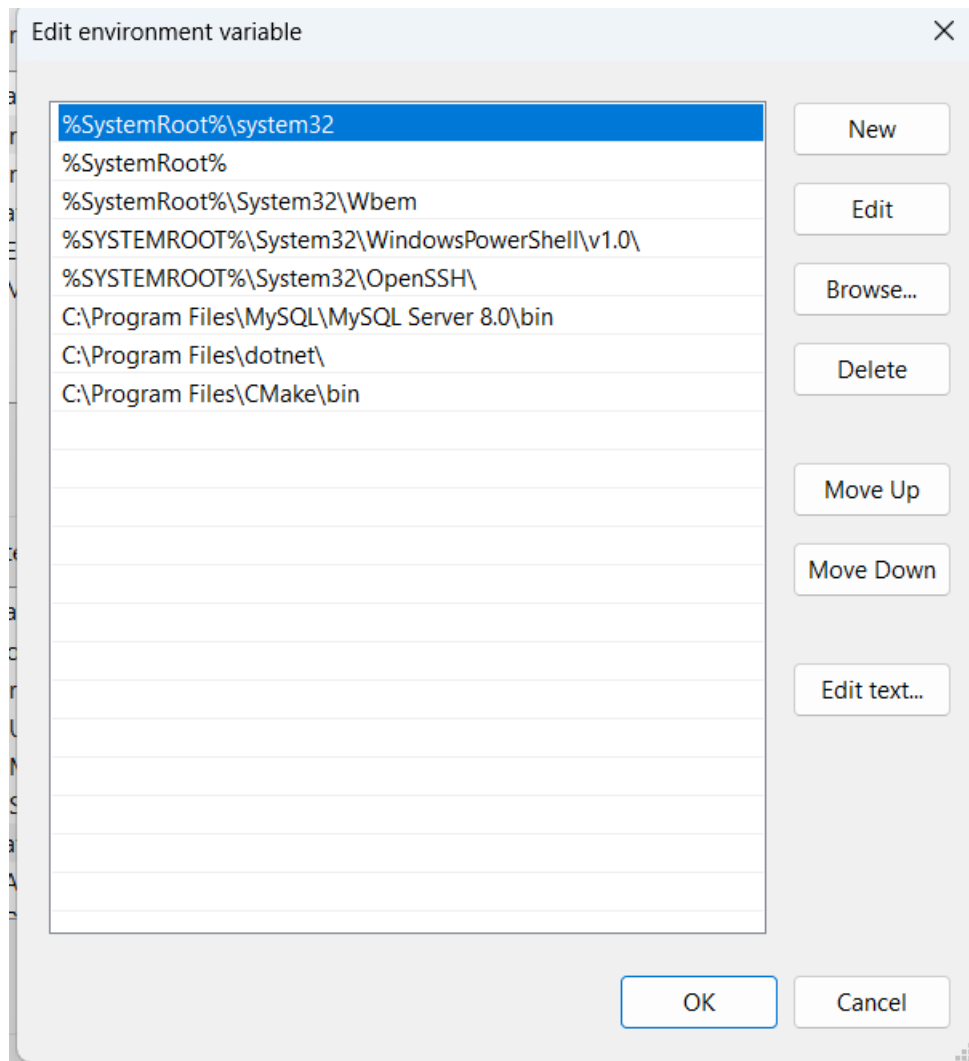

Click on Environment Variables and Click then Click on Path

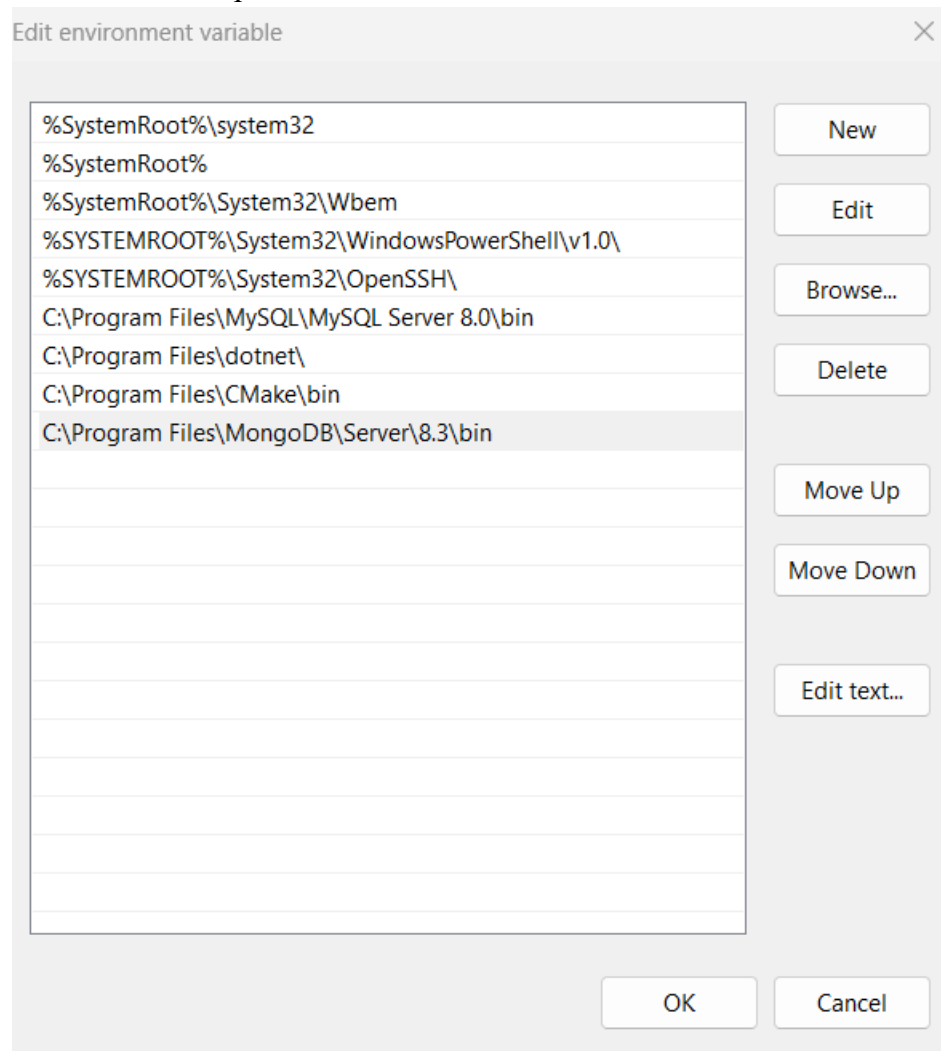

Now click New

Now Paste the copied Path

Now Click Ok again click Ok and again Click Ok.

Now click on this link given below:-

<https://www.mongodb.com/try/download/shell>

Scroll down until you say something like below:-

Learn more

Version

2.8.3

Platform

Windows x64 (10+)

Package

msi

Download

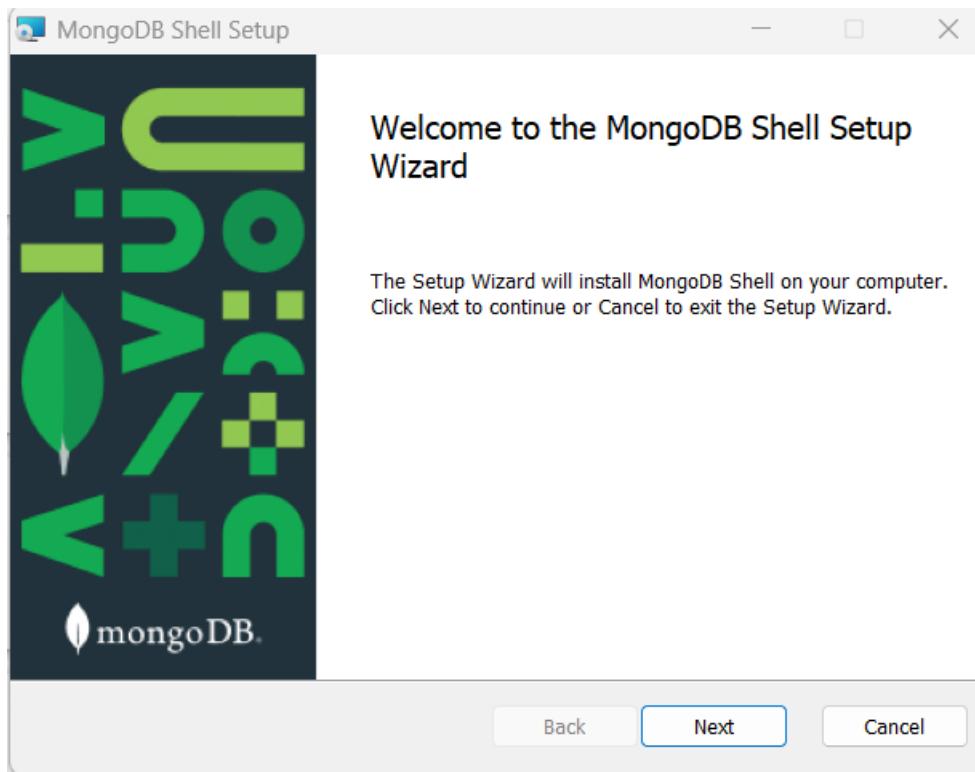

Copy link

More Options

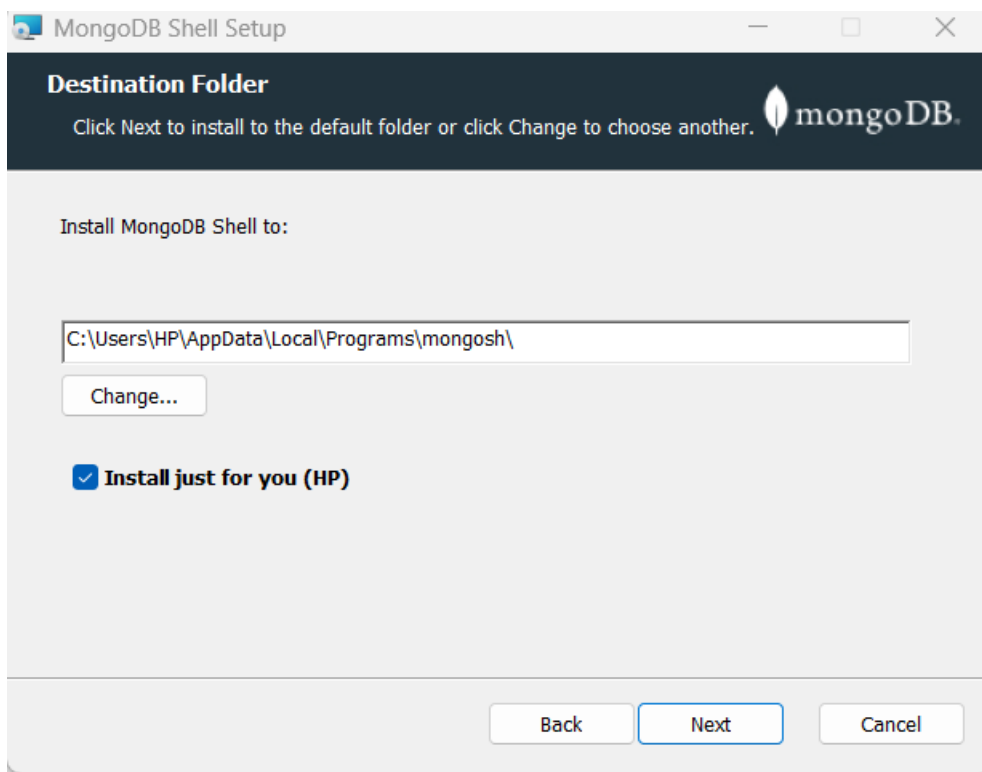

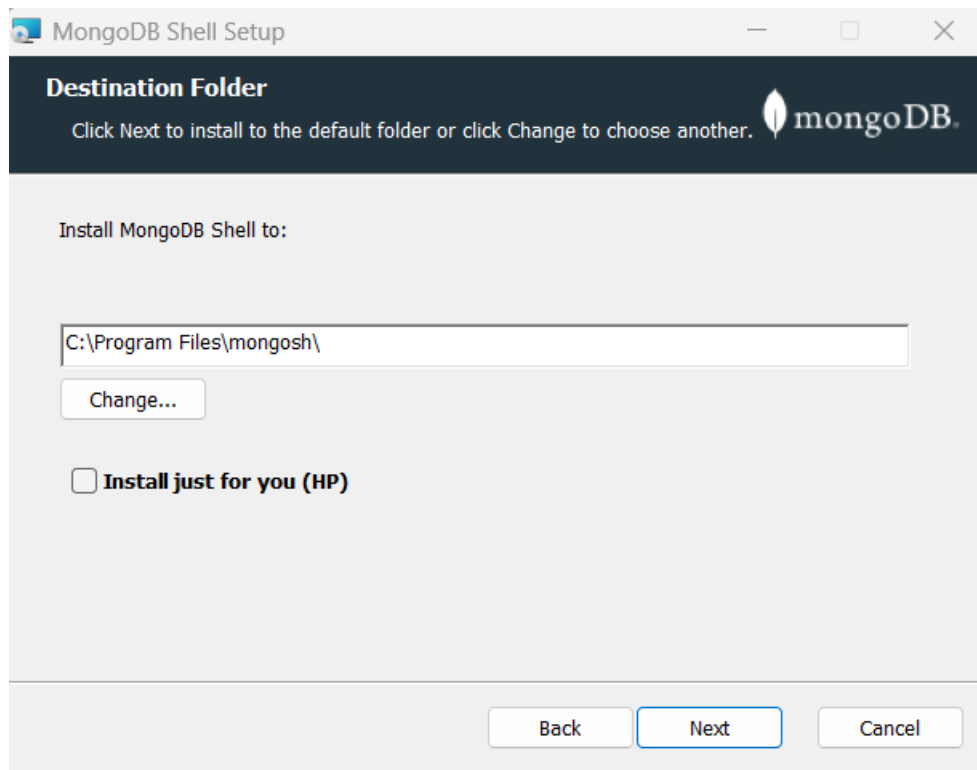

Now Ensure that Platform is “Windows x64” and package as “msi”.The version may differ as of May 2026 version 8.3.1 is the latest.Click on Download and downloading will start.

Now click Next

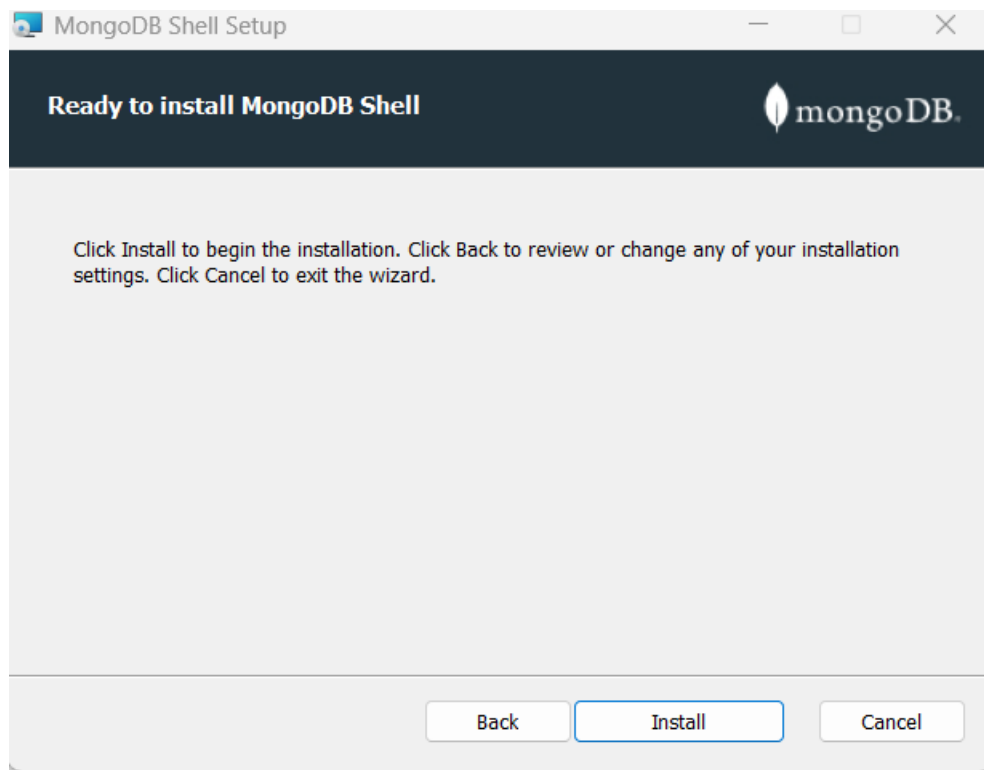

Now uncheck Install just for you(hp) box and click Next

Now open Command Prompt and type the command given below:-

`mongod --version`

You will see output given like below:-

```
C:\Users\HP>mongod --version
db version v8.3.1
Build Info: {
  "version": "8.3.1",
  "gitVersion": "094e631246d5b5bee5bd5f20b12f882bc8e286ea",
  "modules": [],
  "allocator": "tcmalloc-gperf",
  "environment": {
    "distmod": "windows",
    "distarch": "amd64",
    "target_arch": "amd64"
  }
}
```

Now type command given below:-

mongosh

The output will be like below:-

```
C:\Users\HP>mongosh
Current Mongosh Log ID: 69ff6e06df25308722abc113
Connecting to:      mongodb://127.0.0.1:27017/?directConnection=true&serverSelectionTimeoutMS=2000&appName=mongosh+2.8.3
Using MongoDB:      8.3.1
Using Mongosh:       2.8.3

For mongosh info see: https://www.mongodb.com/docs/mongodb-shell/

To help improve our products, anonymous usage data is collected and sent to MongoDB periodically (https://www.mongodb.com/legal/privacy-policy).
You can opt-out by running the disableTelemetry() command.

-----
The server generated these startup warnings when booting
2026-05-09T21:05:53.097+05:30: Access control is not enabled for the database. Read and write access to data and configuration is unrestricted
-----
test> |
```

Now you have Installed Mongo DB completely and you can type Mongo DB commands
